| Gary | Marrer | 5-3235 | Gary.Marrer@gccaz.edu |
| College | Project title | | |
| GCC | I2SAT – Integrated Instructional Space Assessment Task Force | | |

Team members – List the team members involved in this project, including yourself. Provide name, job title, email for each. One person per line.

Chuck Jeffrey, Dean of Instruction, charles.jeffery@gccaz.edu
 Daniel Jewell, Faculty - Computer Information Systems, daniel.jewell@gccaz.edu
 Theresa Hilding, Enterprise Application Designer, theresa.hilding@gccaz.edu
 Gary Marrer, BIT Dept. Chair & Faculty – Computer Information Systems, gary.marrer@gccaz.edu
 Alfred Gonzales, Director College Facilities Planning and Development, al.gonzales@gccaz.edu
 Sandi Reyes, Coordinator Property Control, sandi.reyes@gccaz.edu
 Dr. Philip Fernandez PhD, Faculty – Biology, philip.fernandez@gccaz.edu
 Mike Williams, Supervisor Maintenance, john.williams@gccaz.edu
 James Sanders, Faculty – English, james.sanders@gccaz.edu
 Scott Kozakiewicz, Manager Media Services and Help Desk, scott.kozakiewicz@gccaz.edu
 Joshua Krek, Senior Network Administrator, josh.krek@gccaz.edu
 John Kakritz, Senior Network Technician john.kakritz@gccaz.edu

A team photograph including all members must accompany this application. Photograph must be 5"x7" and 300dpi or larger. Create a caption for this photograph Identifying team members (using full names) in order of appearance from left to right.

| <p>Executive summary (50 words or less)</p> |
| <p>I2SAT is the first systematically integrated approach that provides both an instructional facility condition audit and an automated methodology for ongoing maintenance of GCC's instructional areas. Participation of all employee groups ensures that priorities are established to effectively and efficiently maintain instructional areas in order to provide quality instruction at GCC.</p> |

Innovations should include information that addresses all of the criterion below and is in alignment with the [Maricopa Vision, Mission, and Value Statements](#).

| |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Quality: It is evident that the innovation increases "quality" in the course, program, office, or institution.</p> |
| <p>Ensures that a campus-wide audit of learning spaces is performed and provides an ongoing measurement via a dashboard to measure and report on the quality of those learning environments. This project has streamlined learning space maintenance processes, provided for inviting learning environments, and increased our ability to be good stewards of our taxpayer dollars by reducing duplicate efforts and providing necessary data. Although it could be easy to dismiss, the quality of student learning space has been shown to directly impact student success (Uline & Moran, 2008)¹. Though difficult to quantify, the I2SAT project, by increasing the quality of student learning environments, has likely had great positive and direct impacts on student learning and success.</p> |
| <p>Efficiency: There is evidence that the innovation contributes to a more efficient way of doing things.</p> |
| <p>An automated dashboard not only reports results, but also eliminates much of the manual tabulation and report preparation required for this system to report timely metrics. The system quickly and comprehensively provided the mechanism to assess the needs of over 235 instructional spaces (i.e. ca. 250,000 square feet of classrooms and labs) across 2 campuses in less than 3 months.</p> |
| <p>Cost effectiveness: There is evidence that the innovation adds a value to the institution while at the same time containing or reducing costs.</p> |
| <p>This system helps to set priorities which guides the appropriate and conscientious spending of limited college resources. In the long run, this system will enable GCC to more efficiently use the limited dollars available for instructional space upkeep and maintenance. The computerized portion utilizes industry-standard software (Oracle Database and Oracle APEX) in place at GCC and did not require any additional technology expenditures. Please reference the example screenshots of the user interface at the end of this application.</p> |
| <p>Replication: The innovation selected can be replicated in other institutions with a minimum of difficulty.</p> |
| <p>There is little question that this system could be easily replicated across the District at any or all of the colleges. The system is a set of processes designed by the team combined with a computerized database system to facilitate data collection, issue management and resolution, and report generation. Please reference the example screenshots of the user interface at the end of this application in Appendix A.</p> |
| <p>Creativity: The innovation should be as original as possible or the adaptation should be creative.</p> |

¹ Uline, C., & Moran, M. T. (2008). The walls speak: the interplay of quality facilities, school climate, and student achievement. *Journal of Educational Administration*, 55-73.

Maricopa Community Colleges Innovation of the Year Application

The innovation assembled various stakeholders and generated a new set of processes to rapidly assess and report on the state of instructional spaces across two campuses by utilizing existing owned resources. The use of existing resources to create something new is very creative. The system uses a secure online interface which provides a dashboard, metrics on the condition of individual rooms and buildings, and forms to allow staff to collaboratively manage active issues and generate reports. As issues are closed or voided out, the dashboard, reports and building/room metrics are updated real-time without any involvement by IT. This innovation is a unique combination of advanced technology, innovative processes, and a lot of common sense. Please reference the example screenshots of the user interface at the end of this application in Appendix A.

Timeliness: The innovation should not be more than five years old in the institution, but it must have been around long enough to be tested so that it meets most of the criteria.

The I2SAT Team was assembled in Spring 2015 and continues to be in operation since that time. Glendale continues to utilize this system and is actively looking at ways to integrate the system with other data sources to provide additional operational synergies and cost savings.

Learning: The results of the innovation have been shared with others for the benefit of students throughout Maricopa.

This project and the results of the project have been presented at GCC's Convocation events to share the enormous success that the team has had and the incredible benefits that this project has had for our students to learn in clean, well-maintained learning spaces. Additionally, two team members (Theresa Hilding and Daniel Jewell) were presented with a *Gauche Globe Award for Innovation* in Spring 2016 for developing or enhancing a product or process. There is little question that this can be replicated to other colleges as this has already been implemented at both of GCC's Campuses: GCC Main and GCC North. Additional sharing is forthcoming.

Collaboration: The innovation successfully demonstrates collaboration, teamwork, and cooperation to ensure continuous process improvement efforts on behalf of students throughout Maricopa.

Members of all employee groups, Faculty, Administration, Staff, IT, Maintenance & Operations, Furnishings, Carpentry, Electrical, Paint, etc., and staff across two GCC campuses participated in this project initially over the Spring and Summer and it is now used across the college by a number of employee groups. Without the tireless efforts by all, this project never would have succeeded. The participation of such a diverse group of employees demonstrates not only a great dedication to teamwork and cooperation, but also demonstrates a high level of buy-in: that the system itself is well-designed and accessible enough to be utilized and accepted by all.

There are 8 screens that are used by technicians to view, update and closeout issues by category – Life Safety/ADA, General Room/Safety, Ceilings/Lighting, Floors, Furnishings, Walls/Boards, IT and Media. While all employees can view all of the details on these screens, only assigned staff can update or closeout issues.
